

**IMPORTANT INFORMATION REGARDING THE  
STORM DRAIN SYSTEM**

**LOCATED WITHIN THE VILLAGE OF PINECREST, FLORIDA**

**TYPICAL STORM DRAIN INLET**

**TYPICAL STORM DRAIN OUTFALL**

A number of storm drain inlets, similar to the one shown above on the left, are located throughout the Village of Pinecrest. They have been placed in certain areas vulnerable to flooding and are connected to an underground pipe (i.e. culvert) that leads to the closest drainage canal as shown in the picture above on the right of a typical storm drain outfall.

In order to maintain the integrity of this system please refrain from pouring **ANYTHING** into the storm drain inlets. Whatever goes into the inlets will come out into the drainage canal system and unless it is rainwater the water quality of the drainage canal system will be negatively impacted. The following liquids are especially harmful to the environment and to the water quality of the drainage canal system:

- Gasoline
- Oils and other automotive fluids
- Pesticides
- Chemicals of any kind

Should you observe someone pouring anything into a storm drain please immediately call the Village of Pinecrest Public Works Department at (305) 669-6916.
